

1 **ABSTRACT**

2 A cardiac therapy network architecture collects data output by an  
3 implantable cardiac therapy device, processes that data, and distributes it to  
4 various knowledge workers. The cardiac therapy network implements a  
5 presentation architecture that formats and encodes the data using different formats  
6 and protocols to facilitate distribution to and presentation on various computing  
7 devices that might be utilized by the knowledge workers.
